

February - American Heart Month

To raise awareness about heart disease and how it can be prevented

- Heart disease is the #1 cause of death for both men & women in the US.
- The CDC found that **80% of deaths** from heart disease can be attributed to preventable factors!

Type 2 diabetes	Smoking
Cholesterol levels	Blood pressure
Gut health	Obesity
Sedentary lifestyle	

Gut health is a newcomer to the group! Research has found some cardiac conditions can be linked to our gut flora. And new studies continue to find that having a healthy gut (probiotic and prebiotic consumption) can help lead to a healthy heart.

Great month for **Special Sale** on
ProBalance (probiotics) &
Turbotics (probiotics + prebiotics)!

The Bad News:

Heart disease continues to be the #1 killer.

The Great News:

You can prevent most of it!
